Notes on Product Changeover

Introduction

Overview

In the spring of 2004 we introduced numerous new modular installation devices at the Light & Building Trade Fair. Another move in the conversion of devices from 55 mm to 70 mm mounting depth has thus been taken.

Devices with a mounting depth of 55 mm are still available; see the chapter "Modular Installation Devices, Mounting Depth 55 mm N-System". For the autumn of 2005 we are planning a basic range that will provide you with suitable devices over the long term. In this chapter you will find notes on the product changeover:

- Devices that are available for delivery over the long term
- Replacement products for devices with a mounting depth of 55 mm (from the chapter "Modular Installation Devices, 55 mm Mounting Depth N-System")
- Successor products for devices with a mounting depth of 55 mm
- Successor products for devices with a mounting depth of 70 mm

Modular installation devices with a mounting depth of 55 mm and modular installation devices with transparent caps can also be found in the chapters "Switching Devices", "Timers" and "Monitoring Devices". These devices can also be used without the transparent cap in distributors with 55 mm mounting depth.

Note:

For planning security we have marked devices as having "long-term" availability if their discontinuation is not planned. These devices will ensure that demand for replacements and retrofits in distributors for 55 mm mounting depth will be met for several years to come.
