Multifunctional pushbuttons (Continued)							
	The UP 114 bus coupling unit and the corresponding cut-out frame must be ordered separately.						
	UP 231/2 with room temperature controller (discontinued model)						
	This device features the functions of a double bus pushbutton and an adaptive room temperature controller. The adaptive control saves time when putting the controller into operation and prevents regulation problems due to incorrectly set controller parameters (P, I values). The integrated sequential control guarantees optimum regulation when floor heating and radiator heating are combined in one room. The room temperature can be measured using the internal sensor or an external sensor, or by a combination of both.						
	65 x 65 x 15

	UP 231/3 with adaptive room temperature controller						
	This device features the functions of a double bus pushbutton and an adaptive room temperature controller.						
	It is operated by means of four pushbutton rockers with intermediate position. A red LED is located behind each of the rocker windows for the two outside and the two center pushbutton rockers respectively. The two outer pushbutton rockers are used for setpoint displacement and for switching between convenience and standby operation; the desired function can be assigned to the two central rockers through ETS. Below the pushbutton rockers there is a temperature detector as well as LEDs to display setpoint displacements and the operating modes frost protection and nighttime reduction. The temperature controller can be configured as a two-position controller or as a continuous, self-adapting controller for heating operation only, cooling operation only or combined heating/cooling operation. The adaptive control saves time when putting the controller into operation and prevents regulation problems due to incorrectly set controller parameters (P, I values). The integrated sequential control guarantees optimum regulation when floor heating and radiator heating are combined in one room. The room temperature can be measured using the internal sensor or an external sensor, or by a combination of both.

DELTA i-system pushbuttons								
<p>The UP 110 or UP 114 bus coupling unit and the corresponding DELTA line, DELTA vita or DELTA miro frame are not included in delivery and must be ordered separately.</p> <p>The main features of the UP 221 pushbutton for the DELTA i-system are a wide labeling field, flat design and horizontal operation with pushbutton pair. It is also possible to activate an orientation light (LED).</p> <p>The corresponding application program also provides the following optional functions: switching (on/off, over), transmitting values, dimming, shutter/blind control, slat adjustment, call-up and setting of scenes (optionally 1 bit or 8 bit).</p> <p>Together with the respective DELTA i-system frame (DELTA line, DELTA vita, DELTA miro), the pushbutton is clipped onto the UP 110 or UP 114 bus coupling unit. This establishes the electrical connection between the pushbutton and the bus coupling unit over the user interface (UI).</p>
